

# BEYOND IQ: BUILDING JUDGMENT IN THE AGE OF ANSWERS

A reasoning calibration and training platform for high-stakes learning.

## 1. Why now

AI can generate answers in seconds. The scarce skill is judgment: knowing how to verify reasoning, evidence, assumptions, and confidence before accepting an answer.

## 2. Human potential

Human potential is not only what you know or how fast you think. It is how effectively you can monitor, challenge, and redirect your own thinking.

## 3. What's missing

Personalized learning still misses the why. Most systems adapt content or generate explanations. ZigZagUp diagnoses how thinking went wrong — and what kind of repair is needed.

## 4. What ZigZagUp does

Not another answer engine: a diagnostic loop for reasoning. Learners build an answer before choices, make the reasoning path visible, repair the breakpoint, and test whether the repair transfers.

## 5. IKC Scratchpad

Intuition → Knowledge → Critical Thinking → Reasoned Judgment

ZigZagUp makes the transition between these stages measurable and teachable.

## 6. First proving ground

Digital SAT Reading & Writing  
Broader direction: real-world claim evaluation, AI explanations, financial reasoning, and high-stakes learning decisions.
